A TOTAL SOLAR ECLIPSE is a rare event. The last time a total solar eclipse was visible in mainland USA was in 1979. As darkness falls in the middle of day, you may find that the world gets weird. The temperature may change, animals may act differently, the stars become visible, and many other things may happen. **Record anything that seems interesting.**

* If you are not in the path of totality, be sure to keep your eclipse glasses on at all times.
