#### Cottontail Dash

Watch for cottontail rabbits feeding in grassy areas. Rabbits are a favorite food of coyotes, foxes and hawks. When being chased, rabbits sprint in a fast ziq-zaq pattern until they find cover.

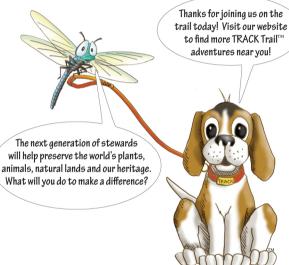

Sprint down the trail in a zig-zag until you find a large tree to hide behind.

#### Squirrely Balancing

As you walk through the woods, look for gray squirrels playing in the trees. Squirrels have long tails to help them balance and maneuver quickly through the branches without falling.

## Animal Athletes

### Critter Cardio for Kids

Wild animals are some of the world's greatest athletes, able to perform amazing physical feats. Are you ready to exercise with the animals of the forest? This brochure will show you how different animals move and guide you through eight animal exercises you can do as you hike the trail.

**CAUTION:** These exercises should only be performed with adult supervision.

#### Hummingbird Hand-swings

Look for ruby-throated hummingbirds feeding on flowers around woodland edges and fields. Hummingbirds flap their wings over 50 times per second! 50 wing-beats per second equals 1500 wing-beats in 30 seconds.

#### Lizard Push-ups

Fence lizards like to hide in the trees and leaf litter of the woods, but if you're lucky you may spot one basking on a sunny log. Male fence lizards do "push-ups" to show-off their blue bellies and defend their territories.

Find a clear, safe spot on the trail and see how many push-ups you can do!

#### White-tailed High Jump

Keep your eyes and ears open for white-tailed deer in the woods and meadows. In order to move quickly through the tall grasses and shrubs, white-tailed deer leap very high — sometimes over 6 feet in the air!

How high can you leap straight up in the air?

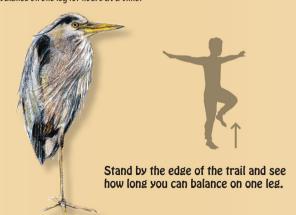

#### Green Frog Hop

Listen for the "gunk!" sound of the green frog around ponds and streams. Green frogs make a tasty snack for predators such as snakes and herons. To escape quickly, frogs use their strong back legs to hop away.

#### Heron Stance

You can often see great blue herons standing by the water's edge with one leg drawn up to rest and conserve heat. The heron's long toes allow it to balance on one leg for hours at a time.

#### Grasshopper Long Jump

You may glimpse grasshoppers in areas with short grass or gravel.

Grasshoppers can jump 20 times the length of their own body.

If you could do that, you would be able to jump almost 100 feet!
